

1. Definition of Interventions:

- "Intervention" includes treatments, procedures, or actions to prevent or treat disease.
- "Non-drug-interventions" encompass therapies without a specific molecular structure.

2. Guidelines for Clinical Trials:

- Studies re-analyzing clinical trial data labeled as respective clinical trials.
- Pharmacokinetic studies labeled as drug-intervention studies.
- Long-term adverse events studies labeled as clinical trials if the therapy is mentioned specifically.

3. General Annotation Guidelines:

- Labels are hierarchical; select the highest applicable label. Refer to the accompanying table for the hierarchy.
- "Remaining" is used for studies outside neuroscience/psychiatry, clinical trials with unspecific therapies, and uncertainties.

4. Study Labels:

- Labels defined for different study types; choose the most specific applicable label.

first word	label	working definition used (applies to title and/or abstract of study)	hierarchy
	Study protocol	A study protocol for a clinical trial or systematic review.	1
human,	systematic review	A structured research summary including human data.	2
	non-systematic review	A text reviewing a certain topic in a non-systematic way.	3
human,	RCT non-drug-intervention	A randomized controlled trial of a non-drug therapeutic intervention in human participants.	4
	RCT drug-intervention	A randomized controlled trial of a drug intervention in human participants.	5
	RCT non-intervention	A randomized controlled trial not testing and therapeutic intervention.	6
	case report	A clinical study reporting findings of one single human individual.	7
	non-RCT non-drug-intervention	Any non-RCT clinical study of a non-drug therapeutic intervention in human participants.	8
	non-RCT drug-intervention	Any non-RCT clinical study of a drug intervention in human participants.	9
animal,	systematic review	A structured research summary including animal data.	10
	non-drug-intervention	An animal study testing a non-drug therapeutic intervention.	11
	drug-intervention	An animal study testing a drug	12
	other	Any animal study not testing a therapeutic intervention.	13
	in-vitro-study	An experimental study conducted outside a living organism.	14
	remaining	Any remaining study type.	15
